

Set up **BYS-Interactive TV** on your Smart TV

Note: this only works on LG and Samsung Smart TVs (without Android).

1. Download the Smart IPTV app on your television
2. Open the app
3. Go to www.siptv.eu/mylist (see below)

A screenshot of the Smart IPTV app's 'Add external playlist links' interface. The interface is white with red text for headings. At the top, it says 'Add external playlist links (URL.s), with auto-update'. Below this, there are two input fields: 'MAC:' with the value '00:00:00:00:00' and 'Link:' with the value 'http://m11y/00000000'. To the right of the 'Link' field are two dropdown menus, one labeled 'Verkie' and one labeled 'Store', and a red 'Add Link' button. Below the 'Link' field is a green plus sign. Underneath, there is a 'Reset playlist' section with a 'MAC:' field containing '00:aa:bb:cc:dd:11' and a red 'Reset' button. At the bottom right, there is a checkbox labeled 'ik ben geen robot' and a reCAPTCHA logo.

4. Fill in MAC: the MAC address that the app indicates on your television.
5. Enter the exact code at Link: as you received it from us by e-mail
6. Click on the "I am not a robot" box
7. Press "Add link"
8. Close the app or switch your TV off and then on again

When you open the app, all channels will now be loaded.

PS: The app is free for a couple of days, after which you have to pay € 5.49 once to the maker of the app to use the app for life (not for the channels of course).

After 7 days you need to activate the app via www.siptv.eu/activation via the MAC address of your TV for € 5.49 via paypal or credit card. After this has been done, you must repeat the above steps from step 3 again. Do you not have a credit card or paypal? Then we can also activate the app for you for € 8.49.

Thank you for choosing our IPTV Service!
